

CABSECURE

Cab Safety Monitoring System

ENGINEERED FOR SAFER OPERATION.

CabSecure monitors seat belt and door status to ensure operators are secured before equipment movement. The system integrates with automatic brake application systems, provides audio and visual annunciation, and includes anti-bypass logic to maintain real compliance underground.

Multiple Configurations to meet all your equipment needs

Technical Features

- Seat Belt & Door Monitoring
- Anti-Bypass Detection Logic
- Audio & Visual Annunciation
- Automatic Brake System Interface
- Supports Real-Time Wireless Monitoring
- Rugged Industrial Enclosure

CabSecure integrates belt and door state monitoring with annunciation and brake system interfacing. Designed for underground equipment, the system reinforces safe operating practices while adapting across multiple machine configurations.

WHY CAB-Secure?

- Prevents seat belt bypass behavior
- Ensures doors are secured before movement
- Supports real-time safety monitoring
- Available in multiple configuration levels
